## **For CE-countries**

This scanner is in conformity with CE standards. Please note that an approved, CE-marked power supply unit should be used in order to maintain CE conformance.

## **Guidance for Printing**

1. This manual is in A5 size. Please double check your printer setting before printing it out.
2. When printing barcodes for programming, the use of a high-resolution laser printer is strongly suggested for the best scan result.

MaxiCode	Disable
DotCode	Disable

## Scan Mode

---

Enter Programming Mode

### Level Trigger Mode

A trigger pull activates a decode session. The decode session continues until a barcode is decoded or you release the trigger.

### Sense Mode (Image Change)

The engine activates a decode session every time it detects a barcode presented to it. The decode session continues until a barcode is decoded or the decode session timeout expires.

### Continuous Mode

The engine automatically starts one decode session after another. To suspend/resume barcode reading, simply press the trigger.

Level Trigger Mode \*\*

Sense Mode (Image Change)

Exit Programming Mode

Enter Programming Mode

Continuous Mode

Exit Programming Mode

Enter Programming Mode

## Sense Mode (Image Change) Sensitivity

This parameter sets the sensitivity of image change trigger. You can select an appropriate level of sensitivity that fits your application environment. This feature is only applicable to the Sense mode.

Low Sensitivity

Medium Sensitivity \*\*

High Sensitivity

Exit Programming Mode

# Aiming

---

Enter Programming Mode

## Trigger

The scanner projects an aiming pattern only during image decoding.

## Always On

Aiming pattern is constantly on after the scanner is powered on.

## Off

Aiming pattern is off all the time.

Always On \*\*

Trigger

Off

Exit Programming Mode

# Illumination

---

Enter Programming Mode

## Illumination Mode

Trigger: Illumination LEDs are turned on during image decoding.

Always On: Illumination LEDs keep on after the scanner is powered on.

Off: Illumination LEDs are off all the time.

Fade Up: Illumination LEDs are dimly lit when in standby mode and gradually increase their brightness during image decode.

Trigger \*\*

Always On

# Decode Settings

---

Enter Programming Mode

## Decode Area

**Whole Area Decoding:** The scanner attempts to decode barcode(s) within its field of view, from the center to the periphery, and transmits the barcode that has been first decoded.

**Aiming Barcode Decoding:** The scanner only decodes the barcode aimed squarely by the aiming pattern. For those using a crosshair aiming pattern, only the barcode aimed by the center of crosshair will be decoded.

Whole Area Decoding \*\*

Aiming Barcode Decoding

Exit Programming Mode

Enter Programming Mode

### Specific Area Decoding 75%

This option allows the scanner to narrow its field of view to make sure it reads only those barcodes intended by the user.

## Decode Redundancy

**Disable:** All code types just read one time.

**2 Times:** All code types must be successfully read two times before being decoded.

**3 Times:** All code types must be successfully read three times before being decoded.

Disable \*\*

2 Times

3 Times

Exit Programming Mode

## Enter Programming Mode

### Decoding Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 1 ms to 3,600,000 ms. When it is set to 0, the timeout is infinite. The default setting is 5,000 ms.

**Example: Set the decoding timeout to 1,000 ms:**

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Decoding Timeout** barcode
3. Scan the numeric barcodes "1" barcode from Numeric Barcodes in Appendix A.
4. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
5. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
6. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix  
Scan the **Exit Programming Mode** barcode

## Decoding Timeout (ms)

Exit Programming Mode

## Enter Programming Mode

### Timeout between Decodes (Same Barcode)

Timeout between Decodes (Same Barcode) can avoid undesired rereading of same barcode in a given period of time. This feature is only applicable to the Sense and Continuous modes. It is programmable in 1 ms increments from 1ms to 5000 ms. The default setting is 3,00 ms.

< **1000 ms** : Do not allow the scanner to re-read same barcode before the timeout between decodes (same barcode) expires.

≥ **1000 ms** : Allow the scanner to re-read same barcode after the timeout between decodes (same barcode) expires..

**Example: Set the Timeout between Decodes to250 ms:**

- 1.Scan the **Enter Programming Mode** barcode
- 2.Scan the **Timeout between Decodes** barcode
- 3.Scan the numeric barcodes "2" barcode from Numeric Barcodes in Appendix A.
- 4.Scan the numeric barcodes "5" barcode from Numeric Barcodes in Appendix A.
- 5.Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.  
Scan the **Exit Programming Mode** barcode

### USB CDC

If scanner is connected to the USB port on a host device, the USB CDC feature allows the host device to receive data in the way as a serial port does. A driver is needed when using this feature.

**Example:** Set the intercharacter delay 100 ms for ASCII 00~127.

1. Scan the **Enter Programming Mode** barcode
2. Scan the **ASCII 00~127 Characters** barcode
3. Scan the numeric barcodes "1" barcode from Numeric Barcodes in Appendix A.
4. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
5. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
6. Scan the **Exit Programming Mode** barcode

**Example:** Set the intercharacter delay 1500 ms for TAB.

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Specified Character** barcode
3. Scan the **TAB** barcode from ASCII Code Barcodes in Appendix C.
4. Scan the numeric barcodes "1" barcode from Numeric Barcodes in Appendix A.
5. Scan the numeric barcodes "5" barcode from Numeric Barcodes in Appendix A.
6. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
7. Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix A.
8. Scan the **Exit Programming Mode** barcode

**Example:** Disable intercharacter delay for codes.

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Disable** barcode

Scan the **Exit Programming Mode** barcode

Set lengths for Code 39 to any length, one or two discrete lengths, or lengths within a specific range. The default is any length.

#### One Discrete Length:

Select this option to decode Code 93 containing a selected length. For example, to decode Code 93 with 10 characters, scan **One Discrete Length**, then scan 1 followed by 0 in Appendix A, Numeric Barcodes. .

#### Two Discrete Lengths:

Select this option to decode Code 93 containing either of two selected lengths. For example, to decode only Code 93 symbols containing either 6 or 12 characters, select **Two Discrete Lengths**, then scan **0, 6, 1**, and then 2 in Appendix A, Numeric Barcodes.

#### Length Within Range:

Select this option to decode a Code 93 symbol with a specific length range. For example, to decode Code 93 containing between 3 and 12 characters, first scan **Length Within Range**. Then scan **0, 3, 1**, and **2** in Appendix A, Numeric Barcodes.

#### Any Length:

Select this option to decode Code 93 symbols containing any number of characters within the digital scanner's capability.

## AIM ID Table

Symbology	ID	Modifier	Description
UPC / EAN	E	0	Standard EAN/UPC (13 digits).
		3	EAN/UPC with 2/5-digit supplemental appended.
		4	EAN-8 .
Code 128	C	0	Standard.
		1	Function code 1 in first character position.
		2	Function code 1 in second character position.

Symbology	ID	Modifier	Description
Code 39	A	0	No checksum checking or Full ASCII conversion.
		1	Check character checked and included in decode string.
		3	Check character checked and stripped from decode string.
		4	No check character with Full ASCII conversion.
		5	Same as '1' with Full ASCII conversion.
		7	Same as '3' with Full ASCII conversion.
Code 93	G	0	Standard.
Code 11	H	0	1-digit or 2-digit check characters checked and included in decode string.
		2	Check character(s) checked and stripped from decode string .

Symbology	ID	Modifier	Description
Codabar	F	0	No checksum checking.
		2	Check character checked and included in decode string.
		6	Check character checked and stripped from decode string.
Plessey	P	0	Standard Plessey.
MSI	M	0	No checksum checking
		1	Mod 10 checked and included in decode string.
		2	Mod 11 and Mod 10 checked and included in decode string.
		3	Two Mod 10 checked and included in decode string.
		5	Mod 10 checked and stripped from decode string.
		6	Mod 11 and Mod 10 checked and stripped from decode string.
		7	Two Mod 10 checked and stripped from decode string.

Symbology	ID	Modifier	Description
I 2 of 5	I	0	No checksum checking.
		1	Check character checked and included in decode string.
		3	Check character checked and stripped from decode string.
IATA 2 of 5	R	0	Standard.
Straight 2 of 5	S	0	Standard.
Matrix 2 of 5	X	M	No checksum checking (non-standard).
		0	Check character checked and included in decode string.
		1	Check character checked and stripped from decode string.
Pharmacode	X	P	Non-standard.
GS1 DataBar	e	0	For all types of GS1 DataBar symbols.
Composite	e	0	CC-A, CC-B, CC-C.

Symbology	ID	Modifier	Description
PDF417	L	0	Reader set to conform to 1994 PDF417 Spec.
		1	Support ECI. All characters 92 are doubled.
		2	Basic Channel operation. Char 92 not doubled.
Micro PDF417	L	0	Reader set to conform to 1994 PDF417 Spe.c
		1	Support ECI. All characters 92 are doubled.
		2	Basic Channel operation. Char 92 not doubled.
		3	Code 128 emulation: implied FNC1 in first position.
		4	Code 128 emulation: implied FNC1 after initial letter or pair of digits.
		5	Code 128 emulation: no implied FNC1.

Symbology	ID	Modifier	Description
Data Matrix	d	0	ECC 000 – 140 , not supported.
		1	ECC 200.
		2	ECC 200, FNC1 in first or fifth position.
		3	ECC 200, FNC1 in second or sixth position.
		4	ECC 200, ECI protocol implemented.
		5	ECC 200, FNC1 in first or fifth position, ECI protocol implemented
		6	ECC 200, FNC1 in second or sixth position, ECI protocol implemented

Symbology	ID	Modifier	Description
QR / Micro QR	Q	0	AIM ISS 97-001 (Model 1) symbol.
		1	QR 2005 (Model 2), ECI protocol not implemented.
		2	QR 2005, ECI protocol implemented.
		3	QR 2005, ECI protocol not implemented, FNC1 implied in first position.
		4	QR 2005, ECI protocol implemented, FNC1 implied in first position.
		5	QR 2005, ECI protocol not implemented, FNC1 implied in second position.
		6	QR 2005, ECI protocol implemented, FNC1 implied in second position
MaxiCode	U	0	Standard

Symbology	ID	Modifier	Description
Aztec	z	0	No Options.
		1	FNC1 in first position.
		2	FNC1 after initial letter or pair of digits.
		3	ECI protocol implemented.
		4	ECI protocol implemented, FNC1 in first position
		5	ECI protocol implemented , FNC1 after initial letter or pair of digits
		6	Stuctured Append header included
		7	Stuctured Append header included, FNC1 in first position.
		8	Stuctured Append header included, FNC1 after initial letter or pair of digits

Symbology	ID	Modifier	Description
		9	Structured Append header included, ECI protocol implemented.
		A	Structured Append header included, FNC1 in first position, ECI protocol implemented.
		B	Structured Append header included, FNC1 after initial letter or pair of digits, ECI protocol implemented.
		C	Aztec Rune symbol.
Dot Code	J	0	Generic data, neither Case A nor Case B below.
		1	Case A – GS1-formatted data.
		2	Case B – application –specific data indicated by opening letter or digits.
		3	Neither Case A nor Case B, with an ECI in the segment and “\”s doubled.
		4	Case A with an ECI in the segment and “\”s doubled.
		5	Case B with an ECI in the segment and “\”s doubled.

Set GS (0x1D) to Other ASCII Code

Exit Programming Mode

# Truncate Data

---

Enter Programming Mode

## Truncate Leading Data

This parameter sets the number of leading data to be truncated. It is programmable in 1 increment from 1 to 20 characters. The default setting is 0.

### Example: Truncate 8 characters of leading data for all barcodes

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Leading Data For All Barcodes](#)

Scan the numeric barcodes "8" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

### Example: Truncate 2 characters of leading data for code 128

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Leading Data For Specified Barcode](#)

Scan the [Code 128](#) barcode from Symbologies Barcodes in Appendix

Scan the numeric barcodes "2" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

### Example: Disable truncate leading data for all barcodes

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Leading Data For All Barcodes](#)

Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

Truncate Leading Data For All Barcodes

Exit Programming Mode

Enter Programming Mode

Truncate Leading Data For Specified Barcode

Exit Programming Mode

## Enter Programming Mode

### Truncate Ending Data

This parameter sets the number of ending data to be truncated. It is programmable in 1 increment from 1 to 20 characters. The default setting is 0.

**Example: Truncate 5 characters of leading data for all barcodes**

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Ending Data For All Barcodes](#)

Scan the numeric barcodes "5" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

**Example: Truncate 1 characters of leading data for code 39**

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Ending Data For Specified Barcode](#)

Scan the [Code 39](#) barcode from Symbologies Barcodes in Appendix

Scan the numeric barcodes "1" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

**Example: Disable truncate leading data for all barcodes**

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Ending Data For All Barcodes](#)

Scan the numeric barcodes "0" barcode from Numeric Barcodes in Appendix

Scan the [Exit Programming Mode](#) barcode

## Truncate Ending Data For All Barcodes

## Custom Defaults

### Write to Custom Defaults

Custom default parameters can be configured to set unique default values for all parameters. After changing all parameters to the desired default values, scan the **Write to Custom Defaults** barcode below to configure custom defaults.

### Restore Custom Defaults

If custom default values were configured (see **Write to Custom Defaults**), the custom default values are set for all parameters each time the **Restore Defaults** barcode below is scanned.

Write to Custom Defaults

Restore Custom Defaults

Exit Programming Mode

## Appendix C - ASCII Code Barcodes

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
00 (NUL)	0	 NUL	Null	Ctrl+@	Alt + 000
01 (SOH)	1	 SOH	Home	Ctrl+A	Alt + 001
02 (STX)	2	 STX	Alt	Ctrl+B	Alt + 002

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
03 (ETX)	3	 ETX	Up Arrow	Ctrl+C	Alt + 003
04 (EOT)	4	 EOT	Null	Ctrl+D	Alt + 004
05 (ENQ)	5	 ENQ	Ctrl	Ctrl+E	Alt + 005

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
06 (ACK)	6	 ACK	Right Arrow	Ctrl+F	Alt + 006
07 (BEL)	7	 BEL	Null	Ctrl+G	Alt + 007
	8	 BS	Left Arrow	Ctrl+H	Alt + 008

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
09	9	 TAB	TAB	Ctrl+I	Alt + 009
0A (LF)	10	 LF	Down Arrow	Ctrl+J	Alt + 010
0B (VT)	11	 VT	Null	Ctrl+K	Alt + 011

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
0C (FF)	12	 FF	Null	Ctrl+L	Alt + 012
0D (CR)	13	 CR	Enter	Enter	Enter
0E (SO)	14	 SO	Page Up	Ctrl+N	Alt + 014

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
0F (SI)	15	 SI	Page Down	Ctrl+O	Alt + 015
10 (DLE)	16	 DLE	F11	Ctrl+P	Alt + 016
11 (DC1)	17	 DC1	Null	Ctrl+Q	Alt + 017

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
12 (DC2)	18	 DC2	Null	Ctrl+R	Alt + 018
13 (DC3)	19	 DC3	Null	Ctrl+S	Alt + 019
14 (DC4)	20	 DC4	Null	Ctrl+T	Alt + 020

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
15 (NAK)	21	 NAK	F12	Ctrl+U	Alt + 021
16 (SYN)	22	 SYN	F1	Ctrl+V	Alt + 022
17 (ETB)	23	 ETB	F2	Ctrl+W	Alt + 023

HEX	Decimal	ASCII	Function Key Mapping		
			Disable	Control-Key	Alt+Unicode
18 (CAN)	24	 CAN	F3	Ctrl+X	Alt + 024
